

ODFORM Overview

ODFORM allows for law enforcement agencies using Case Explorer to enter suspected overdose events in ODMAP and simultaneously start a new case in Case Explorer. ODFORM can only be accessed if you have a Case Explorer account connected to your ODMAP account. ODFORM does not appear until a suspected overdose is submitted to ODMAP. Once data is entered into ODFORM, it is not stored in ODMAP, however the incident can be seen on the National Map.

Due to HIPAA, no Personally Identifiable Information (PII) or Protected Health Information (PHI) information is stored in ODMAP. ODFORM is linked to ODMAP, but the data is stored on our secure, separate, Case Explorer Server.

Submitting Overdose Events through ODFORM

Like ODMAP, ODFORM allows the user to manually enter case information using an online form. ODFORM still requires participants to enter the four required fields:

1. Location
2. Time and date
3. Fatality status
4. Naloxone administration

ODFORM also allows participating agencies to collect and track information such as: demographics, seizure information, and officer contact information. An example of ODFORM's data entry form can be found on the left side of this document.
